# Ex No: 1 Setting up a Zoho Creator account and exploring the platform architecture and interface

**Pragadeesh - 240701388**

## 1. Aim

To set up a Zoho Creator account and to explore the platform architecture and the interface sections of Zoho Creator using the Patient Appointment & Scheduling Management application as the working example.

## 2. Procedure

1. Open the Zoho Creator website and click **Sign Up Free**. Register with an email address and verify it.
2. Select the data centre region and complete the profile. The dashboard opens with the list of applications in the workspace.
3. Click **Create Application → Create from scratch** and name it *Patient Appointment & Scheduling Management*.
4. Explore each section of the left navigation and note its purpose:
    - **Applications:** core workspace to build, edit, configure, share and publish apps such as the appointment application.
    - **Microservices:** host custom backend functions and reusable APIs outside individual apps.
    - **Environments:** Development → Stage → Production, so a new feature can be tested without disturbing the live clinic application.
    - **Mobile:** access forms, reports and dashboards on phones and tablets, using camera, location and notifications.
    - **Portal:** give external users (for example patients) restricted access without giving them a full account.
    - **Users:** list of all users granted access by role.
    - **Organisation:** profile, preferences and branding.
    - **Governance:** security policies for the account.
    - **Metrics:** usage dashboards and application analytics.
    - **Operations:** operational logs and monitoring.
    - **Billing:** current plan (Free Plan) and subscription details.

5. Open the application in Edit mode and study the builder: **Forms, Reports, Pages, Workflows, Settings**.
6. Draw the architecture diagram: Users & Access (patients, front desk, doctors, administrator via browser, mobile, tablet) → Zoho Creator Application Layer (forms, reports, pages, workflows, Deluge) → External Systems (payment gateway, Zoho Calendar, email/SMS).

[Insert screenshot: Applications page showing the Patient Appointment application]

[Insert screenshot: Microservices, Environments, Mobile, Portal, Users, Organisation, Governance, Metrics, Operations and Billing pages]

[Insert screenshot: Architecture diagram of Zoho Creator for the appointment application]

## 3. Result

A Zoho Creator account was created, the Patient Appointment & Scheduling Management application was started, and every section of the platform interface and its architecture was explored and documented.
