Ex No: 2 Patient Appointment Booking Form — Basic Fields Use Case

Pragadeesh - 240701388

1. Aim

To design and build the *Appointment_Booking_Form* in Zoho Creator using all thirteen Basic Fields — Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select and Checkbox — and to generate the *Appointment_Booking_Report* so that the front desk and doctors can filter, confirm and schedule appointments. This replaces phone-call and walk-in booking, which causes double bookings, missed follow-ups and no record of symptoms before the consultation.

2. Procedure

1. Open the application in Edit mode, click **Create New → Form** and name it *Appointment_Booking_Form*.
2. Create the sections and drag the fields into them:
    - **Section A — Patient Details:** Patient_Name (Name: first/last), Age (Number), Gender (Radio: Male / Female / Other).
    - **Section B — Contact Details:** Email_Address (Email), Contact_Number (Phone), Residential_Address (Address).
    - **Section C — Medical Details:** Referred_By (Single Line), Department (Drop Down), Existing_Conditions (Multi Select), Symptoms_Description (Multi Line).
    - **Section D — Scheduling & Consent:** Preferred_Appointment_Date (Date), Preferred_Appointment_Time (Time), Consent_For_Treatment (Checkbox).
3. Configure the validations in Field Properties:
    - Mark Patient Name, Phone, Age, Gender, Department, Preferred Appointment Date and Consent as **mandatory**.
    - Email: enable built-in email format validation.
    - Phone: enable country code format for Indian numbers.
    - Age: restrict the range from 0 to 120.
    - Date: disallow past dates.
    - Consent checkbox: the form cannot be submitted unless it is checked.
4. Click **Access → Preview** and submit the sample record (Meera Krishnan, 34, Female,

General Medicine, 05-Aug-2026, 10:30 AM).

5. Open *Appointment_Booking_Report* and submit at least three sample records.
6. In the report, filter by Department and Preferred Appointment Date to confirm the slot with the doctor.

3. Result

The Appointment_Booking_Form was built with all thirteen Basic Fields and the required validations, and submitted records appeared correctly in the Appointment_Booking_Report for the front desk to filter and confirm.
