Ex No: 4 Patient Appointment Reports Suite — Report Types Use Case

Pragadeesh - 240701388

1. Aim

To build nine reports on the Appointment_Booking_Form, one for each Zoho Creator report type, so that the front desk, doctors, administrator and management each get a view suited to their decisions.

2. Procedure

1. Click **Create New → Report**, select *Appointment_Booking_Form* and choose the report type each time.
2. Build the nine reports:
    - **List View — All_Appointments_List:** columns Patient Name, Department, Gender, Preferred Appointment Date, Status; sorted by date ascending; search bar and filters on Department, Gender and Status.
    - **Spreadsheet View — Appointments_Spreadsheet:** only Check-In Status, Consultation Status and Payment Status are editable (Front Desk role); grouped by Department.
    - **Kanban View — Appointment_Status_Kanban:** grouped by Status (Requested / Confirmed / Checked-In / Consulted / Cancelled); card shows Patient Name and Department.
    - **Calendar View — Appointment_Schedule_Calendar:** based on Preferred_Appointment_Date; clicking a date drills down to that day's patients.
    - **Map View — Patient_Residential_Map:** based on the geocoded Residential_Address; pins coloured by Department.
    - **Timeline View — Appointment_Activity_Timeline:** based on Appointment_Submitted_On, grouped by week.
    - **Pivot Table — Department_By_Gender_Pivot:** rows Department, columns Gender, values Count; blank cells shown as zero.
    - **Chart View — Department_Load_Chart:** bar chart, X = Department, Y = Count of appointments.
    - **Summary View — Doctor_Wise_Summary:** grouped by

Doctor_Availability_Lookup with Count of appointments; records without a doctor go under "Unassigned".

3. Add sample records so every report shows data.
4. Demonstrate an interaction: drag a Kanban card from Requested to Confirmed and click a calendar date to drill down (before/after screenshots).

[Insert screenshot: Report type selector and each of the nine reports with sample data]

[Insert screenshot: Kanban card drag — before and after]

[Insert screenshot: Calendar date drill-down]

3. Result

All nine report types were created on the Appointment_Booking_Form with the required grouping, sorting and validation settings, and the drill-down and drag interactions worked as expected.
