Ex No: 5 Patient Appointment Command Center — Page Elements Use Case

Pragadeesh - 240701388

1. Aim

To build the single internal page *Clinic_Command_Center_Page* using all eleven Page Builder elements — Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button, Widgets and Viewer — so that staff can monitor and manage the visit lifecycle from one screen.

2. Procedure

1. Click **Create New → Page**, name it *Clinic_Command_Center_Page*, and open the Page Builder.
2. Add **Panel** *Command_Center_Main_Panel* as the outer container, with role-based visibility for front-desk and clinical staff.
3. **Section 1 — Overview:** add the **Gauge** *Daily_Patient_Target_Gauge* (top-left; colour changes green to red near capacity), the **Chart** *Department_Load_Chart_Widget* (auto-refresh) and the **Search** *Patient_Search_Bar* (Patient Name, Contact Number, Appointment ID).
4. **Section 2 — Processing:** add the **Button** *Send_Appointment_Reminder_Button* (triggers a workflow for appointments dated today) and the **Board** *Appointment_Status_Board* with a column for each Status value; dragging a card updates the record.
5. **Section 3 — Detail:** embed the **Report** *Full_Appointments_Report*, with Excel export limited to administrators.
6. **Section 4 — Sidebar:** add the **Snippet** *Clinic_Guidelines_Snippet*, the **Viewer** *Medical_Report_Viewer* (shows the latest uploaded report) and the **Form** *Quick_Walkin_Appointment_Form* as an expandable tab.
7. **Section 5 — Operations:** add the **Widgets** *DoctorAvailability_And_Queue_Widgets* in the bottom strip.
8. Save, open the page in Access mode, and test search, drag-and-drop on the Board, the reminder button and the Viewer.

[Insert screenshot: Board drag-and-drop — before and after]

[Insert screenshot: Viewer displaying a sample medical report]

3. Result

The Clinic_Command_Center_Page was built with all eleven Page elements and gave the front desk one workspace for monitoring, searching, processing and reference.
