Ex No: 6 Patient Appointment Automation Suite — Workflow Options Use Case

Pragadeesh - 240701388

1. Aim

To build eight automations on the Appointment_Booking_Form, one for each Zoho Creator workflow option — Form Workflows, Schedules, Approvals, Payments, Blueprints, Batch Workflows, Report Workflows and Functions — so that the appointment lifecycle runs with minimal manual work.

2. Procedure

1. Open **Workflows** from the left navigation of the application.
2. **Form Workflow — On_Appointment_Submit_Workflow:** triggered on Add (successful submission); emails the patient the Appointment ID and notifies the front desk. If the contact number is invalid, log the error instead of blocking the booking.
3. **Schedule — Daily_Appointment_Reminder_Schedule:** runs daily at 6:00 PM; selects records whose Preferred Appointment Date is tomorrow and sends one reminder with time, doctor and department.
4. **Approval — Special_Procedure_Approval:** triggered when Special_Procedure_Requested is set; routes to the department's on-call doctor, with the department head as fallback; Status stays "Pending Doctor Approval" until approved or rescheduled.
5. **Payment — Consultation_Fee_Payment_Workflow:** generates a gateway payment link for Net_Payable_Fee, sets Payment_Status to Paid or failed, stores the transaction reference, and retries the status callback up to 3 times.
6. **Blueprint — Appointment_Lifecycle_Blueprint:** stages Requested → Confirmed → Checked-In → Consulted → Cancelled; each transition is limited to specific roles and needs a mandatory comment.
7. **Batch Workflow — Bulk_FollowUp_Reminder_Batch:** runs nightly at 9:00 PM, processing follow-up reminders in batches of 150 records.
8. **Report Workflow — OnEdit_Recalculate_NetFee_Workflow:** fires on Edit in the report, only when Consultation Fee or Insurance Coverage Percent changes, and recalculates Net_Payable_Fee.
9. **Function — Generate_VisitSummary_Function:** a reusable Deluge function that

builds the visit summary PDF and emails it; validates that Patient Name and Doctor are present; called when Status becomes Consulted and from a *Resend Visit Summary* button.

10. Test end to end: submit a booking, pay, approve, move the record through the Blueprint, and confirm the summary email.

3. Result

All eight workflow options were configured with their governance rules, and the appointment lifecycle from booking to post-visit summary ran automatically.
