Ex No: 7 Automated Business Workflow using Deluge Scripting (Testing and Debugging)

Pragadeesh - 240701388

1. Aim

To implement an automated workflow in the Patient Appointment & Scheduling Management application using Deluge scripting, and to test and debug it so that an acknowledgement email is sent the moment an appointment is submitted.

Objectives

- Configure a form event that runs when a record is created successfully.
- Read field values (name, email, department, date) in Deluge and send an email.
- Perform end-to-end testing and debugging.

2. Procedure

1. Open the application in Edit mode and select **Workflows → Create Workflow**.
2. Choose the form *Appointment_Booking_Form*, set **Record Event = Created** and **Form Event = Successful form submission**, and name it *Send_Appointment_Acknowledgement*.
3. Click **Add New Action → Deluge Script** and enter the script:

```
appt = Appointment_Booking_Form[ID == input.ID];
if(appt.Email_Address.isBlank())
{
    info "No email address - acknowledgement skipped";
}
else
{
    sendmail
    [
        from: zoho.adminuserid
        to: appt.Email_Address
        subject: "Appointment Request Received - " + appt.Department
        message: "Dear " + appt.Patient_Name.first_name + ", your appointment
request for "
                 + appt.Preferred_Appointment_Date + " has been received. Our
front desk will confirm the slot shortly."
```

```
    ]
}
```

4. Click **Save Script**, then **Save** the workflow.
5. Test: open the form in Access mode and submit a record with a valid email.
6. Debug: check the mailbox, then use the **Execution logs** and `info` statements. Test again with a blank email to confirm the else-branch runs without error.
7. Fix any issue found (for example a wrong field link name) and retest.

[Insert screenshot: Workflow setup window]

[Insert screenshot: Deluge script editor with the script saved]

[Insert screenshot: Received acknowledgement email and execution log]

3. Result

The Deluge workflow was created, tested and debugged, and an acknowledgement email was sent automatically for every new appointment request.
