Ex No: 11 Deploying a Zoho Creator Application from Development to Production

Pragadeesh - 240701388

1. Aim

To deploy the Patient Appointment & Scheduling Management application through the Development, Stage and Production environments of Zoho Creator.

2. Procedure

1. Open the **Environments** page from the left navigation. The deployment flow is Development → Stage → Production.
2. Make sure the application is built and saved in the **Development** environment.
3. Click **Deploy** on the application and choose **Stage** as the target. Add a version note, for example "Basic and advanced fields, reports, workflows".
4. Switch to the **Stage** environment and test the form, reports, page and workflows with sample data. Fix any problems in Development and redeploy.
5. When testing passes, select the application in Stage and click **Deploy to Production**.
6. Open the **Production** environment, confirm the application is live, and share the public form link.
7. Review the deployment timeline showing when the application moved through each stage and who deployed it.

[Insert screenshot: Application running in Production]

[Insert screenshot: Deployment timeline]

3. Result

The application was deployed from Development to Stage and then to Production, so new features can be tested without disturbing the live clinic.
